CAREDIRECTOR TETHERING GUIDE

Tethering Guide V1.0

Document Tethering Guide

Purpose How to tether devices from your work phone

Version V1.0

Owner ICT Business Transformation Team / Adults System Support

Last Updated 19/01/2024

Purpose of this guide

- 1. The purpose of this guide is to inform you how to tether your work device from your work mobile. This useful in situations where you do not have Wi-Fi signal but do have 4G connection on your phone.
- 2. Please note: This does use your mobile phone's data usage please ensure you are not overusing this as it will drain your allocated data usage. Please ensure all updates needed on any device is still done on Wi-Fi connection. This also raises your mobile devices power consumption.

How to tether your device

1. First, you need to enable the setting on your mobile device. Unlock your mobile device and open "Settings".

- 14:45 🖻 🖬 🗣 🔹 🖙 📲 👫 л 37% 🛢 A software update is available Later Update Q Samsung account Profile · Apps and features Connections Wi-Fi • Bluetooth • SIM manager Connected devices Quick Share · Android Auto Modes and Routines S Modes · Routines Sounds and vibration Sound mode · Ringtone Notifications Status bar · Do not disturb 111 \bigcirc 1
- 2. After selecting "Settings", select "Connections".

3. Once selected, then select "Mobile Hotspot and Tethering".

5. Before you come out of that screen you need the name and password of your device you are trying to connect to. Hold onto this information as you need it for your device you need to connect it to. You access this by selecting the name **Mobile Hotspot** NOT the toggle to turn it off/ on.

Please note: DO NOT share this information with others. If you feel your password is compromised, please change it by selecting "Configure".

7. When selected, it will bring up a list of nearby and available Wi-Fi and tethering hotspots. Look for your devices name. In this case my device's name was **Galaxy A12 7872** so I am going to select that one.

8. When selected, press the option "Connect"

Please note: If this is the second time trying to connect your device, you might have left the connect automatically tick on which means your device will try and automatically connect to that device whenever it can. This is why it is important to turn off mobile hotspot when you are finished with it.

9. When selected, it will now ask for the password. I will now type in the password that was listed in my device. It is caps sensitive – type it exactly how it looks on your mobile device. When done, press "Next". Please note: When you type it, it will show as little black dots. This is fine – if you want to make sure you have typed it in correctly, press the eye on the right.

10. Congratulations, you are now connected through hotspot. Remember to turn it off on your mobile device when you are finished. Using this way will use your mobile data so again please do not update devices whilst on 4G or do anything that would deem "strenuous" on your data usage such as playing online videos as this causes a spike in data usage.
